(54) Title: FILM WEB MATERIAL COMPRISING LINEAR OR BRANCHED, ISOTACTIC POLYMERS

(57) Abstract: The present invention provides an article comprising a first element and a second element joined to the first element, the first element comprising a film web material. The article is characterized, in that the film web material comprises a polyolefinic homopolymer having an isotacticity of less than 60 % of [mmmm] pentad concentration. The present invention further provides a method for manufacturing a film web material comprising a step of processing the aforementioned polymeric material, the step of processing selected from the group of casting, extruding, blowing, and combinations thereof. The present invention further provides a method for processing a film web material comprising the aforementioned polymer, the process comprising a step selected from the group of orienting, bi-axially stretching, crazing, stretching, shrinking, and combinations thereof.
